

How to Hellbender a Room

For thorough decontamination of a cross contaminated space

Recommended equipment: 2 handheld ULV foggers, 3 continuous mist spray bottles, personal protective equipment & cover clothes, Rubbermaid totes with lids, contractor grade trash bags, disposable cleaning cloths, microfiber mop (hard floors), bissell carpet cleaner (carpeted floors), bissell upholstery cleaner (upholstered surfaces).

Hellbender Solutions: 1 gallon each of Spray #1 & Spray #2, 1 gallon each of Laundry Solutions #1 & #2; 16 oz Protect! Spray

This protocol addresses cross contamination of a previously mold free space. It is NOT a substitute for mold remediation of a home.

For best results do NOT combine with other cleaning products. Use cold foggers only, not compatible with hot foggers.

When fogging: a light, transparent mist throughout the entire room is the goal. Not saturation.

For best results, always apply Hb Sprays as an ultrafine mist!

1. Fog the room for 10-15 seconds with a light mist of **Spray #1**. *Turn off and unplug all electronics before fogging!*

2. Then remove all items from the room to be discarded, cleaned or laundered.

3. Once the room is empty, fog again for 15-45 seconds with **Spray #1**.

4. After the second application of **Spray #1**, let everything dry for a few minutes.

It's ok if the mist dries completely, but it's not necessary!

5. Fog the entire room for 15-45 seconds with **Spray #2**. Then open windows to air out and let everything dry.

6. Spray a light mist of **Protect!** in the air throughout the room.

7. Mist surfaces and floor with **Spray #2** and wipe to remove residue.

Spray #2 can also be applied after Spray #1 and allowed to air dry.

8. Use 4-8 oz of **Laundry Solution #1** *instead of* carpet shampoo in a carpet cleaner with hot water to decontaminate carpets. Repeat using 4-8 oz **Laundry Solution #2** with hot water to rinse.

9. Clean each non porous item that you removed from the room in a separate, clean space:

Mist with **Spray #1** and let dry....

...then mist with **Spray #2** and wipe or air dry.

10. Discard all items to be thrown away in a trash receptacle outside.

11. Discard protective wear and cover clothes and shower off.

12. Bring your decontaminated items back inside.

Let everything dry before bringing pets back into the room.*

*Use Hellbender Pet & People Probiotic Wash to decontaminate pets' fur!

Important!

***If you're sick or immunocompromised from mold exposure,
enlist the help of someone else to decontaminate spaces,
items and clothing!***

Paper & cardboard typically need to be thrown away. Some people have reported success in remediating books and papers with bentonite clay.
